

# Pay by Bank Set Up Your Dutchie Hub

## STEP 01: POWER ON TERMINAL

**Aries8 (Desktop model)** requires a direct power connection to an outlet.

**A920 (Mobile model)** holds a charge, please connect to charger for first use to confirm battery life.

- ✓ Boot up the terminal & allow 2-3 minutes for the device to fully come online before proceeding.

## STEP 02: CONNECT TO NETWORK

- ✓ For best performance, Aries8 devices should connect via ethernet cable. One end of the cable should connect directly to the internet router & the other end to the port marked LAN on back of terminal.
- ✓ Then, hold down the power button & select REBOOT to reboot the terminal.

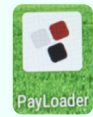

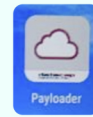

If your terminal was connected to Wifi initially - **scan the QR code in the bottom right corner** for detailed instructions on disconnecting from Wifi.

## STEP 03: DOWNLOADS & UPDATES

- ✓ From the black Dutchie Hub welcome screen, swipe up from the bottom of the screen & tap the < key twice.
- ✓ Enter password **pax9876@@@** then touch ENTER.

Find the Payloader app on the Android Home Screen:

If you see a cloud icon, see **Step 4**.

If you see 3 squares, skip to **Step 5**.

## STEP 04: UPDATE PAYLOADER

- ✓ Tap the cloud icon to open Payloader as it needs to be updated before automatic downloads will begin.
- ✓ In Payloader, enter **DCAP004590** as the package code & tap the download arrow.
- ✓ Download will begin & terminal will reboot. Allow the terminal to sit 5 to 10 minutes after downloading the Payloader update. Then staged updates will begin to download to the terminal automatically.

To manually pull the download: swipe up from the bottom of the screen & touch the back key < twice then enter **pax9876@@@** to find the now updated Payloader app & tap Check In Now button.

## STEP 05: SETUP COMPLETE

If you see the three stacked squares as the Payloader app icon initially on the Android Home Screen:

- ✓ Allow 5 to 10 minutes for your terminal to search & download any additional updates.
- ✓ Your Dutchie Hub Terminal should now be setup & ready to process!

## CONNECTIVITY TIPS

- ✓ If your router does not have available ports, consult an IT professional about a managed ethernet switch.
- ✓ Both models support Wfi connection, however the A920 can use a 5G cellular connection (SIM card must be user-sourced.)
- ✓ For steps to connect to Wifi, scan the QR code to the right for the Full Terminal Setup Guide.
